

New, innovative and better... for the boat, the customer and your marina!

Whether you are developing a new dry stack storage facility or upgrading your marina, MackDaddy carbon fiber-enhanced boat bunk beams are a high-performance solution that solves the problems of plain wood with carpet and ends continuous replacement.

New Buildings - The best bunks for modern marina dry rack storage facilities to better compete for customers, care for boats, maximize revenue potential and operate efficiently.

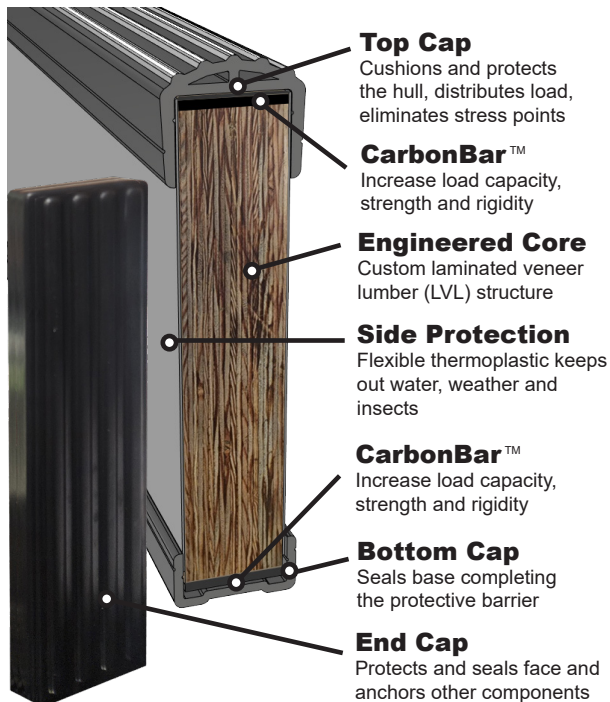

Existing Racks - The smart choice to revitalize dry rack storage facilities to reduce maintenance costs, grow revenue, improve safety, reduce risks and satisfy customers.

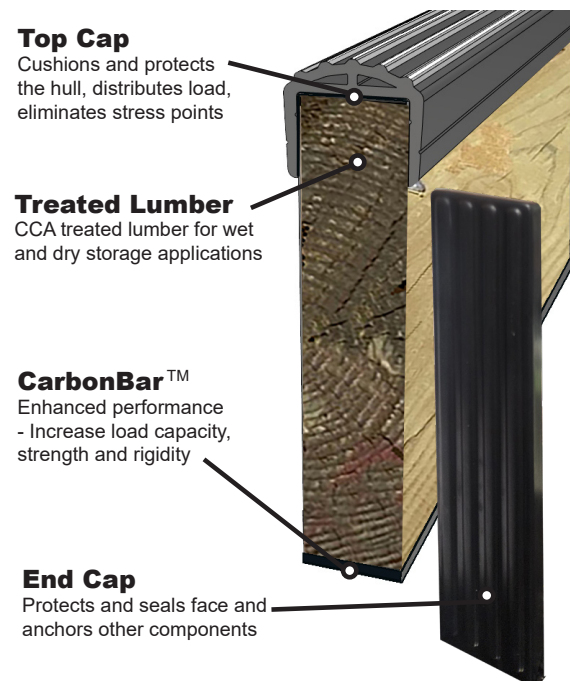

- **Strong** – Carbon fiber increases load capacity by 50% - reducing weight by 40%
- **Reliable** – Reduces failures and performs predictably
- **Durable** – Protects from saltwater, harsh weather corrosion, insects and failure
- **Long-Lasting** – Advanced materials and manufacturing result in longer lasting products
- **Better** – Unlike carpeted lumber, there are no knots, splitting, warping, rotting or hull damage from abrasives

2026 Boat Bunk Beam Catalog

CFSpan and Mack Daddy Buildings collaborated with marina owners to design, engineer, and manufacture a new innovative boat bunk beam that the industry needs.

The Business Case: *Invest for efficiency and operational excellence*

Hassle Free – Ready to install and eliminates the costly continuous replacement cycle

Safer – Improves worker safety and lowers marina owners risks

Attractive – Upgrades appearance with enhanced marina branding

Depreciable – Purchase as a capital investment with tax-advantaged accelerated depreciation

Better ROI – Increases revenue potential and decreases maintenance and replacement costs

Sustainable – Eliminates use of old growth lumber and reduces energy, waste and carbon footprint

Carbon fiber enhanced on the top and bottom
